

Verify the Reliability of your transformers

As transformer age, gaseous and liquid contaminants become dissolved in the dielectric fluid and can lead to failures or shortened useful lives unless detected and treated early.

Transformer oil is sampled at least annually and analyzed for DGA.

We offer a complete assessment package with test results, analysis report and maintenance recommendations

**SPECIAL
OFFER FOR
TRANSFORMER
CONDITION
ASSESSMENT
IN JUST
RS.80000**

Special Package
comprised of.

- Complete Chemical Analysis of oil
